

# Unified Viewing for all Document Types from all Repositories

## WeWebU OpenWorkdesk Advanced Viewing

### ▶ The New Way of Viewing

WeWebU OpenWorkdesk Advanced Viewing is a comprehensive, Java-based viewing suite. It is tightly integrated into the WeWebU OpenWorkdesk and unifies the viewing for all document formats from every repository that OpenWorkdesk supports.

### ▶ No Document Type Dependencies

The Advanced Document Viewer is the powerful core piece of OpenWorkdesk Advanced Viewing, which enables documents of different types to be always displayed consistently. Therefore independent of their document type, TIFF, PDF, PDF/A, HTML, XML, MS Office and Open Office documents, as well as many other image and document formats are shown in exactly the same way. OpenWorkdesk Advanced Document Viewer even allows very large documents to be displayed quickly, thanks to its intelligent memory management and rendering architecture.

### ▶ Ease of Use & Integration in Workflows

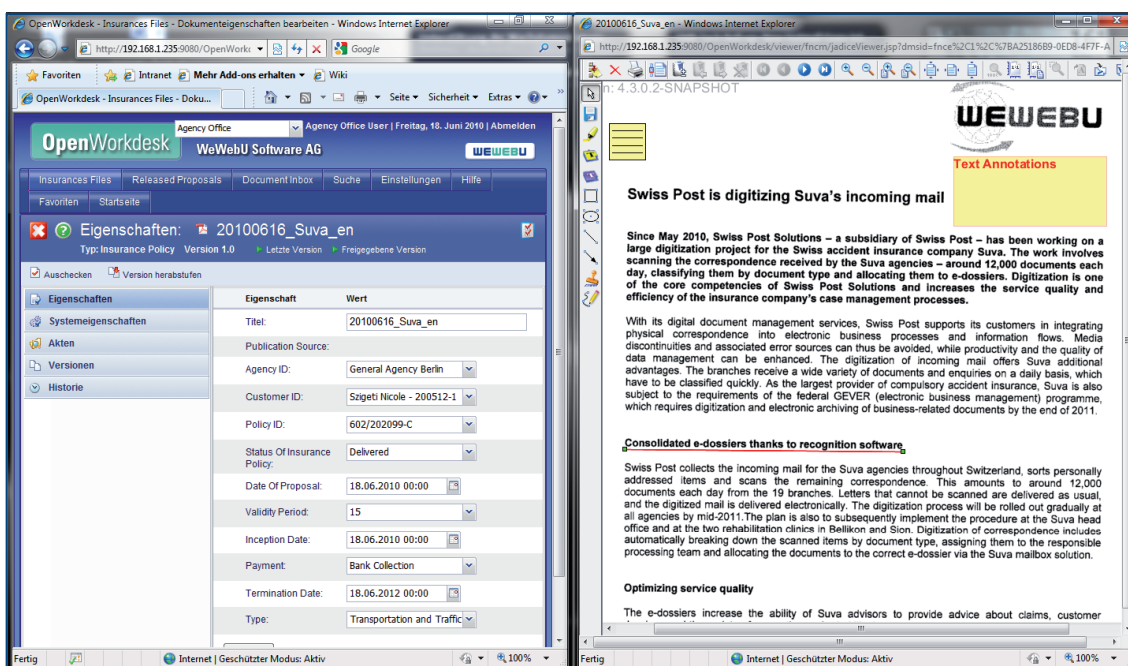

Furthermore, OpenWorkdesk Advanced Document Viewer makes document processing easier, because WeWebU OpenWorkdesk integrates it perfectly

with optimized business workflows. The ability to annotate (using text and/or graphic objects) for the benefit of illustration, highlighting or even hiding parts of a document helps to contribute making collaboration more efficient. In spite of this, the original document remains unaltered, thus making it easy to meet the legal compliance requirements.

For working with text-based documents, OpenWorkdesk Advanced Document Viewer provides standardized text retrieval and easy-to-use copy functions and, of course, the possibility to copy image details to the clipboard.

### ▶ Advanced Document Processing

OpenWorkdesk Advanced Document Processing is a server-side component, which is used to process all data streams on any server. Among other things, the Advanced Document Processing Server generates thumbnails of documents and pages for a clearer and easier overview. It prepares MS Office and Open Office documents in order to gain the best viewing results and opens the appropriate application for converting special document formats into whichever format is desired, so that they can be displayed in the OpenWorkdesk Advanced Document Viewer without delay. Furthermore, it is also possible to print large batches of documents asynchronously.

*A unified viewing of different document types from different repositories makes document processing more efficient.*

## Features

WeWebU OpenWorkdesk Advanced Viewing makes document viewing easy.

### Unified Viewing

- » Immediate displaying of almost every image type and document format
- » High flexibility & compatibility with many standard and special formats such as TIFF, PDF, PDF/A, HTML and XML as source text
- » Displaying of MS Office and Open Office documents
- » Support of resources like AFP & MO:DCA

### Ease of Use

- » Intuitive navigation and control elements:
  - Re-sorting of pages via drag & drop in the thumbnail view
  - Splitting of documents
  - Navigator panel to assist navigation inside large or zoomed pages
  - Lens view and hover lens for observing details
- » Fast displaying of very large documents (technical charts, architecture or site maps, etc.) due to intelligent memory management and rendering architecture
- » Document preview: first pages are displayed while the remaining pages are loaded in the background
- » Efficient collaboration using annotations (text and/or graphic objects) for illustration, highlighting or even for hiding information
- » Standardized text retrieval for all text-based formats
- » Easy copying of text and image details to the clipboard
- » Best viewing results with image quality enhancements

### In General

- » Guaranteed authenticity of original documents
- » Load-balancing due to multi-server capability
- » Centralized and asynchronous document printing
- » Thumbnail generation

### Supported Repositories

You can use WeWebU OpenWorkdesk Advanced Viewing with documents from the following repositories:

IBM ECM systems:

- » IBM FileNet Image Services
- » IBM FileNet Content Manager
- » IBM FileNet Business Process Manager
- » IBM Content Manager (CM8)
- » IBM Content Manager on Demand

Other ECM systems via open standards:

- » JSR 170
- » CMIS

Support for further repositories is available on request.

**FUSIONSTORM**

## Your Partners: WeWebU & FusionStorm

WeWebU Software AG is the specialist for Enterprise Information Management. With our standard products, enterprises can access their complete information infrastructure via a unified, process-oriented working environment. Thus, they reduce costs, increase their employees' productivity, come to decisions faster and better, and make their whole enterprise more agile.

FusionStorm is an IBM Premiere Business partner and Tier One Software ValueNet service provider. Our 18 years of ECM success designing, building, delivering and supporting Content Management and Business Process Management solutions have secured our place as a trusted partner. FusionStorm is the North American distributor for WeWebU products. We support end users, conduct training and enable other partners to deliver solutions based on WeWebU and IBM products. FusionStorm has offices across the U.S. supporting private and public sector clients.
